### **EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Sheryl S. Holloway on November 18, 2004.

The application has been amended as follows:

3. On the specification (page 1 lines 20) after number please insert - - <u>09865030</u>- - before filed

Please replace Claim 1 with the following:

4. Claim 1(currently amended): A <u>computer implemented</u> method for executing a group of commands on a content description structure, the content description structure including a plurality of relationally related nodes, in a computing environment comprising the [steps of]:

semantics and syntax for representing a particular feature of content described by the content description structure;

assigning one or more attribute tags to the group of commands, wherein assigning one or more attribute tags comprises if commands in the group of commands are determined to be dependent, assigning a sequential tag to the group of commands and if commands in the group of commands are determined to be independent, assigning a parallel tag to the group of commands;

executing the group of commands according to the one or more attribute tags, wherein executing the group of commands comprises if the group of commands was assigned the sequential tag, executing commands in the group of commands in sequence and if the group of commands was assigned the parallel tag, executing commands in the group of commands in parallel.

5. Cancel claims 31, and 32.

## Allowable Subject Matter

6. The following is an examiner's statement of reasons for allowance:

Regarding independent claims 1, 14, 33, 38, 44, and 46, the prior art of record fails to disclose or suggest the claimed provision of: method for executing a group of commands on a content description structure, the content description structure including a plurality of relationally related nodes, in a computing environment by determining a dependency between commands in the group of commands based on the relationally related plurality of nodes, wherein at least one node is a description that defines semantics and syntax for representing a particular feature of content described by the content description structure, and assigning one or more attribute tags to the group of commands, wherein assigning one or more attribute tags comprises if commands in

the group of commands are determined to be dependent, assigning a sequential tag to the group of commands and if commands in the group of commands are determined to be independent, assigning a parallel tag to the group of commands, combined with the rest of the limitations in the independent claims, is not taught or suggested, or rendered obvious over the prior art of record or that encountered in searching the invention

7. The dependent claims 2-13, 15-30, 34-37, 39-43, and 45 being further limiting to the independent claims, definite and enabled by the Specification are also allowed.
